

# Cardiac Safety Solutions

MERIT provides standardized collection and analysis of your cardiac safety data. Your data is in the hands of a team of qualified technicians and cardiologists. Our team understands regulatory guidelines and how they apply to advancing your product's development. Furthermore, you won't run the risk of collecting inconclusive data that could bring your program to a standstill.

## CONSISTENT AND SIMPLE DATA CAPTURE AND REVIEW

MERIT provides standardized collection and review of cardiac safety data, often an important safety endpoint in clinical trials. For example, many studies require a normal ECG at screening at a minimum, and others require certain QTcF or QTcB cutoffs for inclusion/exclusion criteria.

### ADVANTAGES TO MERIT'S CARDIAC SAFETY SERVICES:

- High quality capture
- Electronic, centralized ECG system
- Fully traceable 21 CFR Part 11 compliant system
- All ECG data can be accessed anywhere in the world
- MERIT team of cardiologists for expert central review

ECGs are captured directly via USB, and ECGs are transmitted as soon as the site saves the tracing. An ECG auto-interpretation is immediately available and allows for quick identification and response to any errors.

## RELIABLE, STANDARD EQUIPMENT

MERIT ECG units offer dependable and simple data capture via a standard USB connection. The units are:

- Small
- Portable
- FDA 510(k) approved
- Lightweight
- CE Marked
- Rigorously tested
