

COLLECT & HOLD SERVICES FOR ONCOLOGY CLINICAL TRIALS

Securing Your Clinical Trial Images

MERIT's Collect & Hold services are designed to support early phase oncology clinical trials (up to 50 subjects) through the prospective collection and quality control of imaging data, that is—getting study images to a “ready-to-read” state. This is made possible by our streamlined, end-to-end software platform, EXCELSIOR™.

As soon as you have received an IND from the FDA and plan to start collecting images, you can benefit from our Collect & Hold services.

Our Collect & Hold services include image collection and quality check, site support, and project management services.

Ideal for early studies that need to collect longitudinal imaging data, or where centralized imaging review may be incorporated at a later point in time.

This service provides clinical trial sponsors and research organizations with several benefits, including:

- 1. COST SAVINGS:** Completely cloud-based with 24/7 availability of data **saves clinical trial sponsors time and money.**
- 2. ACCELERATED TIMELINES:** Imaging data can be collected and stored in a secured centralized location as soon as patients are enrolled in a clinical trial. You can **analyze data quickly and make faster, more informed decisions.**
- 3. IMPROVED QUALITY OF COLLECTED IMAGES:** EXCELSIOR **automatically removes** PHI and any DICOM non-conformity.
- 4. REDUCED VARIABILITY:** Data curation at a centralized location **reduces variability in imaging data across sites.**
- 5. BUILT-IN COMPLIANCE:** EXCELSIOR meets FDA, EMA, and other **regulatory requirements.**

SUBSCRIBE TODAY!

Our Collect & Hold services are at a standard low annual cost of \$4,999 per project for up to 50 subjects within sites in the USA.

DO YOU HAVE A STUDY WITH MORE THAN 50 SUBJECTS WITH MULTIPLE SITES?

Our system, workflows, and processes are highly scalable to accommodate large studies.

WHY MERIT? *Innovative. Proven. Experienced.*

MERIT has provided image collection, centralized reading, and data management services for clinical trials since 2012.

Our team's collective Phase I - Phase III experience includes support for:

- 500+ oncology studies worldwide
- 25+ different cancer indications
- 144+ global clinical trial sites
- 1,700+ enrolled patients

These studies utilized a variety of advanced imaging modalities.

With MERIT, you benefit from:

- ✓ Single platform for all study data, queries, reporting/tracking, image transfer and analysis
- ✓ Oncology staff averages 10+ years clinical trial experience and many have advanced degrees
- ✓ Step-by-step Imaging Protocols, SOPs, and document support
- ✓ Indispensable regulatory support and guidance
- ✓ Established, time-tested Quality Assurance, security, and data privacy
